

Student Code of Conduct - Online Learning Environment

Love God

- **Be thankful** for the time and resources put together by St. Bernard's College staff to enable you to continue to learn using an online learning environment.

Love Self

- **Have mana/pride** in the learning that you are able to partake in as a digital learner who is part of the wider school community.
- St. Bernard's College reserves the right to disconnect students from the online learning environment, at the teacher's discretion, for being inappropriate or misbehaving. The College may also block access for repeat offenders. If you act like a troll then we'll disconnect you from the online learning environment session. Remember everything digital or online can be traced and we can track it back to where you came from. If you misbehave in the online learning environment then St Bernard's College will take this very seriously and will follow this up with the relevant people.
- Please do not visit an objectionable website while using the online learning environment. 'Objectionable' means a website that you really wouldn't want your grandparents looking over your shoulder at!
- St Bernard's College reserves the right to record lessons delivered in the online learning Environment.

Love Others

- **Be positive** towards your classmates and teachers in the digital learning environment.
- Please don't use mean or cruel words, images, symbols, signs or music when talking to or about another student / member of staff at St Bernard's College. 'Obscene' means using words, images, symbols, signs or music that would upset your grandparents!
- Be respectful and polite. Please do not use the online learning environment to transmit messages that harass or threaten St Bernards staff.
- Please do not deliberately waste time being silly and not working with your teacher. Time wasting means other students are not getting help, and that isn't nice!
- Do not undertake any form of vandalism, including damaging computer systems or networks and knowingly introducing programs such as computer viruses and worms. You might be technically savvy and know about web viruses and worms and how they affect computers but please don't spread these. It takes our attention away from helping you and other students.
